

IMPROVE YOUR ENGINE'S PERFORMANCE

"Look for the Blue Hose"

ETHANOL IS BETTER FOR THE ENVIRONMENT, THE ECONOMY AND FOR YOUR CAR'S ENGINE.

Ethanol is a cleaner burning, higher octane fuel that reduces emission and helps keep your engine clean. Today, the majority of gasoline pumped in America contains E10 - a blend of 10 percent ethanol and 90 percent gasoline.

Vehicles 2001 and newer (more than nine out of 10 cars on the road) can use higher ethanol blends. E15 is proven to boost engine performance, increase horsepower and remove harmful residues on key engine components. It is the most widely tested fuel on the market.

INDYCAR and NASCAR drivers have logged millions of miles racing on E15. Why? Because higher blends of ethanol are a great source of octane for a vehicle's engine. In fact, pure ethanol has an octane rating of 113. If you're looking for some homegrown, clean-burning power for your engine, fill up like the pros and use E15 or E85.

Also keep in mind these higher ethanol blends save you money at the pump and are better for Colorado's air.
